

## Are you studying SARS-CoV-2 T-cell responses?

Scientists continue to search for the SARS-CoV-2 antigens that elicit T-cell responses. We have developed an explorative COVID-19 panel of SARS-CoV-2-specific MHC Dextramer® reagents that can:

- Monitor T-cell immunity in COVID-19 infected patients
- Assess if vaccine candidates elicit efficient T-cell response in individuals
- Facilitate SARS-CoV-2-specific epitope discovery

Our COVID-19 panel comprises 32 Dextramer reagents with predicted epitopes from the SARS-CoV-2 antigens: Spike, Nucleocapside and Membrane protein, and currently covers four common HLA-alleles HLA-A\*0101, -A\*0201, -A\*0301, -A\*1101.

You can also design your own panel of reagents. Let us know if you have epitopes you want to include.
